

Fuel Filter Transition

FF63009 to FF63054NN

This bulletin describes the fuel filter transition from the FF63009 to the FF63054NN. Customers should begin the fuel filter transition process in January 2021.

FF63054NN

The new enhanced FF63054NN has improved durability to meet new OE requirements under severe conditions. Fleetguard's new part number has the same great protection with award-winning NanoNet® media.

The following steps should be taken to transition from the FF63009 to the FF63054NN:

1. Deplete existing FF63009 inventory. This is a "use up and transition" process and should only impact future restock orders planned for the FF63009.
2. Supersede the FF63009 with the FF63054NN in your ordering system. The FF63054NN should be used wherever the FF63009 was previously used.
3. Ensure your customers are fully aware and are familiar with the transition from the FF63009.
