Fleetguard – Keeping You Moving since 1958

The Cummins Filtration story

Cummins Filtration began in 1958 as Fleetguard®, the filtration division of Cummins Engine Company. We are now one of the world's largest heavy duty diesel engine component companies, supplying Original Equipment Manufacturers (OEMs) worldwide.

Cummins Filtration expanded to Australia in 1977, importing product from the USA and distributing through a national distributor network in the South Pacific region.

Cummins Filtration Australia began manufacturing Fleetguard [air filters](#) [1] **at our facility in Kilsyth, Victoria in 1990; a strategic decision to increase market share, support local manufacturing through the creation of jobs and reduce import costs. Twenty-five years on, our heavy duty air filtration production line is still in full swing, supplying product to Australia, New Zealand, Papua New Guinea, select Pacific Islands and to distribution centres in Singapore, the United States and Europe.**

We began manufacturing heavy duty [engine coolant](#) [2] **locally in 1995. Our PG Plus™ [3] and PG Platinum™ [4] coolants are the first choice for major fleet operators throughout the South Pacific region.**

Most recently, in 2010, we opened our [AdBlue®](#) [5] **production facility, which is fully compliant with International Organisation for Standardisation, ISO 22241-1, and is certified by the German Association of the Automotive Industry – Verband der Automobilindustrie e. V. (VDA) for AdBlue manufacture and quality systems.**

Today and beyond

Cummins Filtration's global success is a result of our passion to provide unparalleled customer support and excel in every facet of our business, from providing superior filtration performance to more efficient methods of production and delivery methods.

Our Fleetguard range of filtration, coolant, crankcase ventilation and emissions control technology offers dependability and reliability above and beyond OEM specifications. Our [product lines](#) [6] **cover a wide variety of applications and markets including trucks, 4WDs and vans, industrial equipment for construction, mining, agriculture and marine applications, as well as products for the power generation industry.**

We make it our business to grow your business because we understand that for our company to prosper, so too must our customers. From supplier certification programs, ongoing employee training and development, and investment in environmental sustainability, Cummins Filtration is your supplier of choice for heavy duty diesel engine components.

Our commercial vehicle after-treatment and emission reduction engine systems are the latest additions to our product group, continuing our commitment to using the right technology solutions for a cleaner planet.

Cummins Filtration believes in meeting and exceeding our customers' service requirements. When you buy a Cummins Filtration product, you are assured of superior [warranty](#) [7] **protection from the point of purchase throughout the recommended life of the product.**

We pride ourselves on providing comprehensive product training through our [FACTS training program](#) [8] **incorporating Fleetschool, available to all dealers, distributors and end users.**

Cummins Filtration is committed to the manufacture and supply of quality products and services. Our Quality System achieved certification to ISO 9001 in 2003, followed by ISO 14001 (Environmental) in 2009 and OHSAS 18001 (Health and Safety) in 2011.
